Sterling Fitness — Technique Tables (FIT-T)

Sterling Fitness · SterlingLife · draft v0.2 · 2026-10-27 · for owner review · Method only: no member results in this file. Generated from fitness_spec.py.

Terms

Term	Code name	Meaning
Body part	`body_part`	What gets scored, e.g. Legs.
Movement	`movement`	The kind of motion, e.g. Knee bend.
Main muscles	`muscles`	The muscles a movement works. Described, never scored.
Exercise	`exercise_id`	What the member does and logs, e.g. Leg Press (legPress). The id never changes; the name may.
Set	`sets`	One round of an exercise, as logged in the app.
Age band	`age_band`	The member's age range. It picks targets and tests.
Target	`target`	The weekly amount a body part should get. Same for everyone in an age band.
Program	`program`	The exercises assigned to one member for a period. Built by code (N3), approved by the member (G1).

Code key

Code	Meaning
N0-N3	Intake: member record, age-band planner, evidence store, program builder
ST1-ST5 ...	Agents, by lane (ST = Strength, CA = Cardio, ...)
R-xx	Results set for one lane
X0-X3	Checks: sources, contradictions, scoring, re-tests
S1-S4	Outputs: 925 score, assessment, wiki, plan
G1-G4	Approval gates: a person must approve before work continues
D# / O#	Deviation (code differs from this table) / open owner decision

Exercise model (proposed)

Body part → Movement → Exercise. Every exercise belongs to one movement. Every movement belongs to one body part. Muscles are described, never scored. No row has a published source yet. Unmarked exercises are not in the app yet.

Upper body

Movement	Main muscles	Exercises: name, id
Push forward (push)	Chest, front shoulders, triceps	Chest Press `chestPress` · **in app** Push-up `pushUp` · **logged, skipped (D4)** Wall Push-up `wallPushUp`
Push overhead (push)	Shoulders, triceps	Overhead Press `military` · **in app** — App name today: Military Seated Dumbbell Shoulder Press `seatedDumbbellPress`
Arm straighten (push)	Triceps	Triceps Extension `triceps` · **in app** — App name today: Triceps Triceps Pushdown `tricepsPushdown`
Pull down (pull)	Upper back (lats), biceps	Lat Pulldown `lat` · **in app** — App name today: Lat Assisted Pull-up `assistedPullUp`
Pull back (pull)	Middle back, rear shoulders, biceps	Seated Row `row` · **in app** — App name today: Row Band Row `bandRow`
Arm bend (pull)	Biceps	Biceps Curl `bicepCurls` · **in app** Hammer Curl `hammerCurl`
To confirm (O3) (pull)	To confirm	Overhead Pull `overheadPull` · **in app** — What this exercise is: O3 Shoulder Crunch `crunch` · **in app** — App name today: Crunch. Not a stomach crunch. O3

Core

Movement	Main muscles	Exercises: name, id
Trunk curl	Front stomach muscles (rectus abdominis)	Ab Crunch `abs` · **in app** — App name today: Abs Ab Machine Crunch `abMachineCrunch`
Trunk twist and side bend	Side stomach muscles (obliques)	Side Bend `sideBend` Standing Cable Twist `standingCableTwist`
Back raise	Lower back	Bird Dog `birdDog` Back Extension `backExtension`
Hold steady	Deep stomach muscles, lower back	Plank `plank` Wall Plank `wallPlank`

Legs

Movement	Main muscles	Exercises: name, id
Knee bend	Quadriceps, glutes	Leg Press `legPress` · **in app** Squat `squat` · **logged, skipped (D4)** Sit-to-Stand `sitToStand`
Hip bend	Glutes, hamstrings	Hip Bridge `hipBridge` Hip Hinge `hipHinge` Deadlift `deadlift`

Knee curl	Hamstrings	Hamstring Curl `hamstringCurl`
Leg out to the side	Hip abductors (glute medius, tensor fasciae latae)	Side Leg Raise `sideLegRaise` Hip Abduction Machine `hipAbductionMachine`
Leg in	Adductors (inner thigh)	Hip Adduction Machine `hipAdductionMachine` Ball Squeeze `ballSqueeze`
Knee lift	Hip flexors	Standing Knee Raise `standingKneeRaise` March in Place `marchInPlace`
Heel raise	Calves	Heel Raise `heelRaise`
Toe raise	Shin (tibialis anterior)	Toe Raise `toeRaise`

Rules

1. Score by body part. Log by exercise.
2. Each exercise has a permanent id. Never match logs by name.
3. Compare weight and progress only within the same exercise (ST4).
4. Code builds the program from written rules (N3). A language model never does.
5. The member approves the program before it starts (G1).
6. Score against targets, never against the program, so changing exercises keeps the score consistent.
7. Every movement and exercise needs a published source before it ships.

ST1 · Training Volume & Muscle Balance (ages 50-64 · 65+)

Checks that each body part gets enough strength work, often enough, for the member's age band. One agent for all ages: only the target changes, and N1 supplies the band.

Step	What it does	Rule or source	Status
ST1.1 Load target and program	Reads the age band from N1 and loads that band's weekly targets, and the member's approved program from N3. Stops and reports if the band has no approved target.	NSCA2019, BORDE2015	**proposed**
ST1.2 Find body part	Looks up the body part of each logged exercise in the exercise model.	Program rule	**built**
ST1.3 Count sets	Adds up sets per body part, Sunday to Saturday.	Program rule	**built**
ST1.4 Count days	Counts the days each body part was trained. Target: 2 or more.	WHO2020, PAG2018	**proposed**
ST1.5 Score	Per body part: sets / target, capped at 1. Score = 100 x the average of the three.	Program rule	**built**
ST1.6 Compare with program	Counts how many of the program's exercises were done this week.	Program rule	**proposed**
ST1.7 Report	Sends sets, days, age band, target, the target's sources and the program count to R-ST.	Program rule	**proposed**

Deviations: where the code differs

Id	Agent	Detail
D1	ST1	The fitness_analytics.py docstring describes a 'hard set' rule (3 or fewer reps in reserve, or at least 60% of estimated 1RM). The code counts every logged set, because the app records no weight or effort. Fix: reword the docstring to match the code. Weight and effort belong to ST4.
D2	ST1	Training days per body part (ST1.4) are not counted or scored.
D3	ST1	The weekly targets are one placeholder table for every age, with no source.
D4	ST1	Squats and push-ups are logged but skipped by the code (EXCLUDED_EXERCISES). The exercise model counts them.
D5	ST1	The scoring code uses four groups (lower_body, upper_push, upper_pull, core) and averages four. The model has three body parts (legs, upper_body, core).
D6	ST1	The scoring code matches logs by the app's names (e.g. 'Military'), not by id. Switch matching to ids before any app name changes, or logged sets stop counting.

Owner decisions (not build instructions)

Id	Agent	Decision
O1	ST1	Ages 50-64: no study on weekly sets was found for this age group. Recommended: use the 65+ range (4-9) and label it 'not validated under 65'. It is the lower, safer dose.
O2	ST1	The weekly target. Recommended: 6 sets per body part, e.g. 3 sets on 2 days or 2 sets on 3 days.
O3	ST1	Which movement are Overhead Pull and Crunch (shoulder crunch)? Both count as upper body, pull today.
O4	ST1	Upper body now holds both push and pull. One target for the whole upper body could be met by pull work alone. Recommended: the upper body target counts push and pull separately (6 sets each), using each movement's side.
O5	ST1	Should following the program count toward the score? Recommended: no. Report it only (ST1.6), so the score means the same thing whichever exercises a member is assigned.

Appendix A: step notes

Step	Note
ST1.1	First, because the band is known before ST1 runs. 65+: 2-3 sets per body part per session, 2-3 sessions a week, so 4-9 sets a week. Today one placeholder table for all ages: legs 10, push 8, pull 8, core 5. See D3, O1, O2.
ST1.2	The guidelines (WHO2020, PAG2018) ask for all major muscle groups; the three body parts are the program's own split. See D4, D5, O3.
ST1.3	Every logged set counts. See D1.
ST1.4	Same target for every age band. Not scored today. See D2.
ST1.5	The cap stops extra work on one body part from making up for one that was skipped.

ST1.6	Reported, not scored, so rotating exercises never changes the score. See O5.
ST1.7	X0 needs the sources to check every result.

Appendix B: sources

Id	Citation	Ages covered	Used for	How far checked
WHO2020	Bull FC, Al-Ansari SS, Biddle S, et al. World Health Organization 2020 guidelines on physical activity and sedentary behaviour.
